Product Description

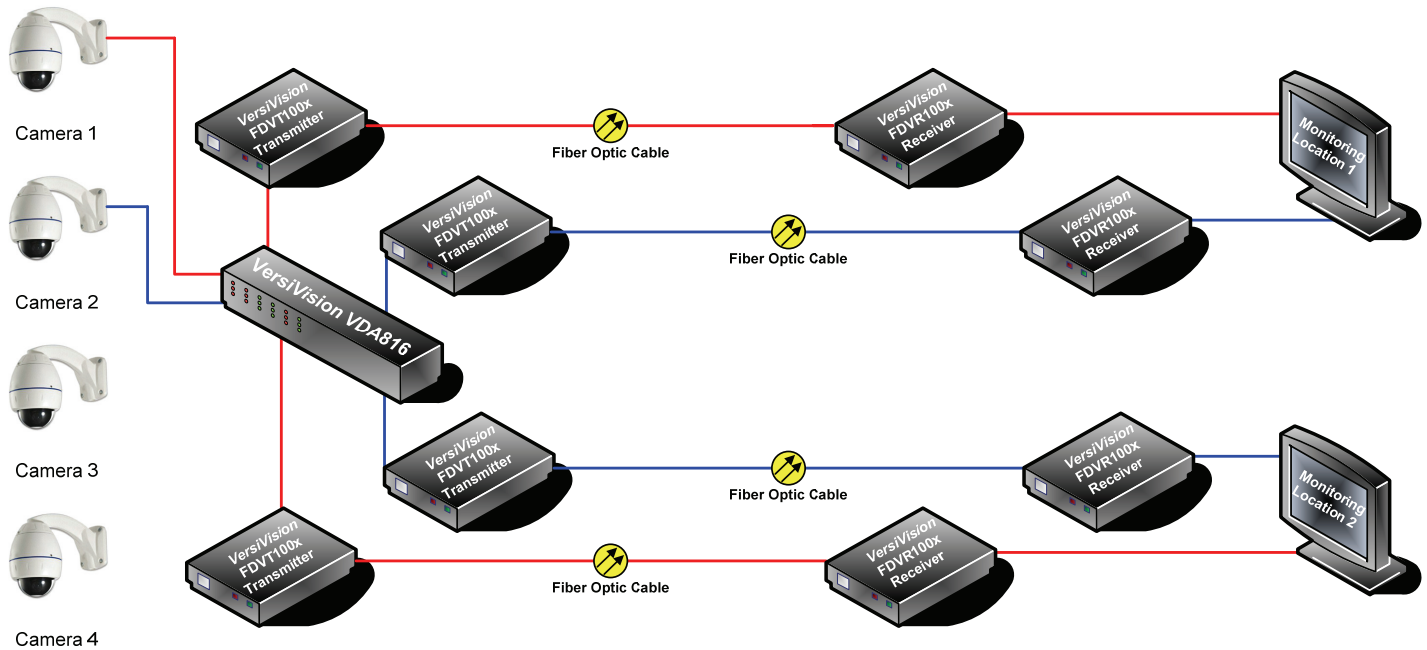

The VERSITRON **VersiVision** Series video/audio distribution amplifiers are designed to distribute video and audio inputs to multiple video and audio outputs. The VDA816 is capable of eight video inputs and sixteen video outputs. The built in amplifier circuit will boost the signals to the required level to prevent signal loss and picture degradation. The VDA816 is designed to work with CCTV video cameras, and can work with any other video equipment using standard BNC video connections. Ideal for applications requiring multiple monitoring locations. Permits easy connectivity to fiber optic video links. (See Page 2)
